On the Cover

The 1859 point marking the “end” of a 324-mile GLO survey effort for the 6th Principal Meridian’s Baseline. Unknown to the GLO surveyors was the fact that they were more than 3,000 feet short of their true goal, the intersection of the baseline and the Rocky Mountain Continental Divide.

Features

12 Rocky Mountain High

How a group of surveyors from Colorado, Kansas and Nebraska recovered the point where the longest PLSS Baseline in the country crosses the Continental Divide.

By *Jerry Penry, LS*

30 Perhaps the Most Incorrect of Any Land Line

In a struggle that has lasted for more than 100 years, New Mexico continues to try to reclaim about two-thirds of a million acres of its territory.

By *Fred Roeder, LS*
